TYPICAL CURED PROPERTIES:	Application of Adhesive				
	The resin/hardener mix is applied with a spatula to the pretreated and dry joint surfaces.				
	A layer of adhesive 0.002 to 0.004-inches (0.05 to 0.10-mm) thick will normally impart the greatest lap shear strength to a joint.				
	The joint components should be assembled and clamped as soon as the adhesive has been applied. Even contact throughout ensures proper cure.				
	<b>Standard Test Specimens</b> Unless otherwise stated, the figures given below were all determined by testing standard specimens made up by lap-jointing 4-inch x 1-inch x 0.06-inch (10-cm x 2.5-cm x 1.5-mm) strips of aluminum. The joint area was 0.5 inch x 1 inch (12.5 mm x 2.5 cm) in each case.
