

IX 28214

Two component epoxy paste adhesive

Key properties

- Grey paste
- High temperature and chemical resistance
- Low shrinkage
- Very resistant to water and a variety of chemicals
- Gap filling, non sagging up to 5mm thickness

Description

IX 28214 is a two component, room temperature curing, thixotropic paste adhesive of high strength with good environmental and excellent chemical resistance. Used for bonding of metals, electronic components, GRP structures and many other items where a higher than normal temperature or more aggressive environment is to be encountered in service. The low out gassing makes this product suitable for specialist electronic telecommunication and aerospace applications.

Product data

	28214A	28214B	28214(Mixed)
Colour (visual)	beige paste	grey paste	grey paste
Specific gravity	1.6	1.6	ca.1.6
Viscosity at 25°C (Pas)	100	thixotropic	thixotropic
Pot Life (100 gm at 25°C)	-	-	60 minutes

Processing

Pretreatment

The strength and durability of a bonded joint are dependant on proper treatment of the surfaces to be bonded. At the very least, joint surfaces should be cleaned with a good degreasing agent such as acetone or other proprietary degreasing agents in order to remove all traces of oil, grease and dirt. Low grade alcohol, gasoline (petrol) or paint thinners should never be used. The strongest and most durable joints are obtained by either mechanically abrading or chemically etching pickling the degreased surfaces. Abrading should be followed by a second degreasing treatment

Mix ratio	Parts by weight	Parts by volume
28214A	100	100
28214B	50	50

IX 28214 is available in cartridges incorporating mixers and can be applied as ready to use adhesive with the aid of the tool recommended by IXChemistry.

Application of adhesive

The resin/hardener mix may be applied manually or robotically to the pretreated and dry joint surfaces. A layer of adhesive 0.05 to 0.10 mm thick will normally impart the greatest lap shear strength to the joint. The joint components should be assembled and secured in a fixed position as soon as the adhesive has been applied. Too thick rubber can not bring greater bonding strength.

Equipment maintenance

All tools should be cleaned with hot water and soap before adhesives residues have had time to cure. The removal of cured residues is a difficult and time-consuming operation. If solvents such as acetone are used for cleaning, operatives should take the appropriate precautions and, in addition, avoid skin and eye contact. Used the packing box can't be used again.

Time to minimum shear strength

Temperature	°C	10	15	23	40	60	100
Cure time to reach LSS >1 MPa	hours	14	8	3	-	-	-
	minutes	-	-	-	60	15	3
Cure time to reach LSS >10 MPa	hours	20	11	5	-	-	-
	minutes	-	-	-	80	20	4

LSS =Lap shear strength

Typical cured properties

Sample standard

Unless otherwise stated, the figures given below were all determined by testing standard specimens made by lap-jointing 114 x 25 x 1.6mm strips of aluminium alloy. The joint area was 12.5 x 25 mm in each case. The figures were determined with typical production batches using standard testing methods. They are provided solely as technical information and do not constitute a product specification.

Average lap shear strengths of typical (ISO 4587)

Cure: 16 hour/40°C, tested at 23°C. Metals: Sand blasting, Non-metallic: Lightly abrade and alcohol degrease.

Lap shear strength versus temperature (ISO 4587) (typical average values)

Cure: (a) 7 days/23°C, (b) 24 hours/23°C + 30 minutes/25°C

Roller peel test (ISO 4578) (typical average values)

On aluminium sandblasted, cured 16 hours at 40°C

3.0 N/mm

Glass transition temperature (DSC) (typical average values) (ISO 11357-2)

Cure: 24 hours at 23°C plus 1 hour at 80°C:

ca. 85°C

Shear modulus (DIN 53445) (typical average values) Cure: 16 hours / 40°C

50°C - 1.2 GPa
75°C - 400 MPa
100°C - 180 MPa
125°C - 20 MPa

Flexural Properties (ISO 178) (typical average values) Cure 16 hours / 40°C, tested at 23°C

Flexural Strength

60 MPa

Flexural Modulus

4350 MPa

Tensile Properties (ISO 527) (typical average values) Cure 16 hours / 40°C, tested at 23°C

Tensile Strength

26 MPa

Tensile Modulus

4350 MPa

Elongation at break

0.7 %

Additional electrical properties (typical average values)	Test values	Test methods
Dielectric strength (Volt/mil)	440	ASTM D-149
Surface resistivity (Ohm)	7.0 E+15	IEC 60093
Volume resistivity (Ohm-cm)	6.1 E+15	IEC 60093
Dielectric constant at 60Hz	4.0	IEC 60250
Loss tangent, % at 60Hz	1.0	IEC 60250

Lap shear strength versus immersion in various media at 23 °C ISO4857 (typical average values)

Unless otherwise stated, L.S.S. was determined after immersion for 30, 60 and 90 days at 23°C

Lap shear strength versus tropical weathering(40/92, DN 50015)

Cure: 16 hour/40°C, tested at 23°C, (40°C / 92% RH), on aluminium, C. Pretreatment - Sand blasting

Lap shear strength versus heat ageing (ISO 4587)

Cure: 16 hour/40°C, tested at 23°C, (40°C / 92% RH), on aluminium, C. Pretreatment - Sand blasting

Storage

IX 28214 may be stored for up to 36 months at room temperature provided the components are stored in sealed containers. The expiry date is indicated on the label.

Handling precautions

Caution

Our products are generally quite harmless to handle provided that certain precautions normally taken when handling chemicals are observed. The uncured materials must not, for instance, be allowed to come into contact with foodstuffs or food utensils, and measures should be taken to prevent the uncured materials from coming in contact with the skin, since people with particularly sensitive skin may be affected. The wearing of impervious rubber or plastic gloves will normally be necessary; likewise the use of eye protection. The skin should be thoroughly cleansed at the end of each working period by washing with soap and warm water. The use of solvents is to be avoided. Disposable paper -not cloth towels -should be used to dry the skin. Adequate ventilation of the working area is recommended. These precautions are described in greater detail in the Material Safety Data Sheets for the individual products and should be referred to for fuller information.

All recommendations for the use of our products, whether given by us in writing, verbally, or to be implied from the results of tests carried out by us, are based on the current state of our knowledge. Notwithstanding any such recommendations the Buyer shall remain responsible for satisfying himself that the products as supplied by us are suitable for his intended process or purpose. Since we cannot control the application, use or processing of the products, we cannot accept responsibility therefor. The Buyer shall ensure that the intended use of the products will not infringe any third party's intellectual property rights. We warrant that our products are free from defects in accordance with and subject to our general conditions of supply.
